

Outdoor Telecoms Cabinet

The cabinet is a two compartment cabinet designed to be used on cell site locations. The main compartment provides a secure weather protected environment for a 8 module rack, and a universal combiner unit. This space also houses thermal management equipment, located in the door space.

The second compartment, to the right side provides electrical connections and AC distribution. The roof provides access to the universal combiner unit, DDF blocks and air filter.

The cabinets are brand new from the manufacturer and are made to a sheet steel design, fabricated to create a single piece rigid carcass with two compartments and three doors. Each door is lockable using a bespoke locking mechanism.

- The cabinet footprint is 900mm wide and 800mm deep.
- The overall height of the cabinet is 2035mm.
- The mass of the cabinet as supplied for installation is 230Kg.
- The mass of the roof as supplied for installation is 24Kg.
- The over ground cable entry plinth mass is 34Kg including two Roxtec glands.
